

29.04.2020 | ARE YOU REORGANIZING YOUR PRODUCTION? RELIABLE TIME DATA HELPS NOW!

Reorganizing production, reallocating work, keeping distance rules? Then you need reliable time data! On the shop floor, time determination is hardly feasible due to contact avoidance requirements. But with MTM-EasyTime, the cloud-based software for time management, time determination also works online.

Many corporations are facing the task of having to reorganize their work processes at this time.

- Are you forced to reorganize your production, e.g. because supply chains are disrupted? Do you have to restructure assembly processes to adhere to the safe distance rules?
- Do you have to reallocate tasks because of short-time work?
- Do the increased hygiene measures ranging from washing hands to regularly changing face masks have to be included in the work sequences and processes?
- Do you have to develop alternative scenarios for production programs that have been changed at short notice?

Then you need reliable time data.

Did you know, for example, that you have to plan approx. 1 second per meter for additional routes required to maintain the minimum distance between people? Did you know that it takes about 4 seconds to put on and take off a face mask? Times determined by MTM offer you the reliability of a globally accepted standard system.

Determining times on the shop floor is hardly possible any longer because of the instructions for preventing contact between people. However, you can now determine times online using **MTM-EasyTime**, the cloud-based software for time management. Simply log in at www.mtm-easy.com and try out the new software. You just need a list of items and basic information about the workplace in question.

If you do not have the capacity to use **MTM-EasyTime** yourself or if you need support for reorganizing your production or implementing the new distance rules at your corporation, then simply use MTM as your back office. Deutsche MTM- Gesellschaft mbH offers to **calculate your “new” production times as an online service too.**
